

Chapter 1 Free Response Practice Test 2

Find the surface area of the solid.

1.

3 pts

1 pt formula/work

1 pt answer

1 pt square meters

net  
Looks Like

$$\begin{aligned}
 SA &= 1 \text{ square} + 4 \text{ triangles} \\
 &= 1 \cdot \text{side}^2 + 4 \left( \frac{1}{2} \cdot \text{base} \cdot \text{height} \right) \\
 &= (4.5)^2 + 4 \left( \frac{1}{2} \cdot 4.5 \cdot 9.8 \right) \\
 &= 20.25 + 88.2 \\
 &= \boxed{108.45 \text{ m}^2}
 \end{aligned}$$

Pattern blocks can be arranged to fit in a circular pattern without leaving spaces. Remember that the measurement around a full circle is  $360^\circ$ .

2. Find the degree measure of one fourth of the numbered angle shown below. All angle measures are congruent.

To find the measure of angle one

$$\frac{360^\circ \text{ in circle}}{6 \text{ angles in circle}} = 60^\circ \text{ each angle}$$

We want one fourth of  $60^\circ$

$$\frac{1}{4} \times \frac{60}{1} = 15^\circ$$

Answer

$$m\angle 1 = 15^\circ$$

**Chapter 1 Free Response Practice Test 2**

3. Explain how you can find the distance between two points without a ruler. Include (1) how to use the **Pythagorean Theorem** and (2) the **Distance Formula** to find the distance between two points, and the length of  $\overline{PR}$  from the figure given below. Find the distance using both methods.

4 pts  
Pyth thm method  
2 pts  
work  
answer  
  
Distance formula  
2 pts  
work  
answer

R (2, 6)  
P (5, 1)

Pythagorean thm

$$a^2 + b^2 = c^2$$

$$3^2 + 5^2 = c^2$$

$$9 + 25 = c^2$$

$$34 = c^2$$

$$\sqrt{34} = c$$

Distance formula

$$d = \sqrt{(5-2)^2 + (6-1)^2}$$

$$d = \sqrt{3^2 + 5^2}$$

$$d = \sqrt{9 + 25}$$

$$d = \sqrt{34}$$

4. The coordinates of midpoint  $M$  and endpoint  $C$  of a segment are  $M(4, 6)$  and  $C(-2, 2)$ . Find the coordinates of the other endpoint.

Apply formula

endpts  
(-2, 2)  
(x, y)

midpt  
(4, 6)

$$(2) \frac{-2+x}{2} = 4 \quad (2) \frac{2+y}{2} = 6$$

$$-2+x = 8$$

$$+2 \quad +2$$

$$x = 10$$

$$2+y = 12$$

$$-2 \quad -2$$

$$y = 10$$

Answer  
other endpt  
is (10, 10)

3 pts - work to find x  
work to find y  
answer as ordered pair

5. **BONUS QUESTION** The longitude-latitude coordinates of Worland, Wyoming are  $(42.2^\circ N, 103.36^\circ W)$  and of Portland, Maine are  $(41.19^\circ N, 71.18^\circ W)$ . If **Worland is one endpoint** of a segment and **Portland is its midpoint**, find the latitude and longitude of the other endpoint.

like #4

3 bonus pts

work to find x

work to find y

answer as ordered pair with direction & degrees!

endpoints

(42.2, 103.36)

(x, y)

midpoint

(41.19, 71.18)

$$(2) \frac{42.2+x}{2} = 41.19 \quad (2) \frac{103.36+y}{2} = 71.18$$

$$42.2+x = 82.38$$

$$-42.2 \quad -42.20$$

$$x = 40.18$$

$$103.36+y = 142.36$$

$$-103.36 \quad -103.36$$

$$y = 39$$

Answer:  
other endpt is  $(40.18^\circ N, 39^\circ W)$
